

DENVER LAUNCH READINESS

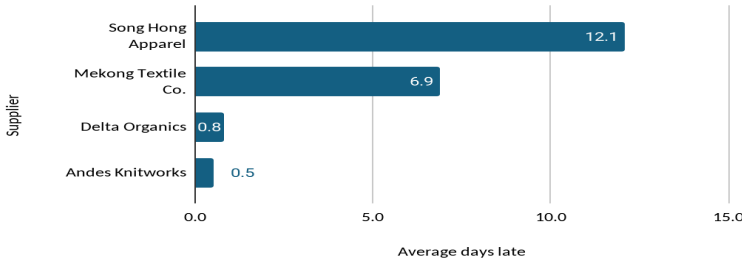

A milestone-gated supplier decision | GreenThreads Operations | Analysis date: August 12, 2026 | Opening: October 12, 2026

Isra Denaguir | AI.205: AI Integration in Business I | Prof. Jeff Eyet | Homework #3

DECISION REQUEST: Approve exception control for Active Shorts and Bamboo Joggers now; release expedite or backup-source spend only after a verified milestone slip or failed two-week buffer test.

01 SIGNAL Historical frequency and severity indicate two suppliers require management attention.
Dataset link: HW1 identified high-risk shipment prediction and supplier reliability scoring as high-impact AI opportunities; HW2 applied that workflow to Denver order SH-2291. HW3 analyzes 96 shipment records joined

Average days late vs. Supplier

to the 8-SKU catalog to quantify that decision.
Verified finding: Song Hong and Mekong were late on all 29 completed shipments, averaging 12.1 and 6.9 days late. Andes and Delta averaged 0.5 and 0.8 days late. Both the on-time rate and the average delay are retained because frequency and severity address different questions.

02 EXPOSURE The two high-severity suppliers account for nearly half of Denver launch retail value.

Launch product	Supplier	Units	Retail value	Avg delay	Control implication
EcoFleece Hoodie	Andes Knitworks	850	\$83,300	0.5 days	Monitor deadline and verify full-carton quantity.
Classic Tee	Delta Organics	1,600	\$60,800	0.8 days	Monitor deadline and verify full-carton quantity.
Active Shorts	Mekong Textile Co.	1,200	\$69,600	6.9 days	Exception control: milestones, buffer test, contingency quote.
Bamboo Joggers	Song Hong Apparel	950	\$74,100	12.1 days	Exception control: milestones, buffer test, contingency quote.
2,150 launch units exposed	\$54,900 opening-buy cost	\$143,700 retail inventory value	49.9% of launch retail value		

Planning inference - not a forecast: Applying Song Hong's 12.1-day historical mean to SH-2291's October 3 promise produces an estimated October 15 receipt, three days after opening. The Operations Manager must confirm the required in-store date, validate the SOP-required two-week buffer, and obtain dated milestones before spending or changing the order.

03 DECISION A gated contingency protects action time without inventing freight or lost-sales estimates.

Choice	Operating move	Value	Trade-off/limitation	Position
A Observe	Rely on promised dates and routine monitoring.	No new process or spend.	No explicit control for suppliers with severe historical delays.	Reject
B Control	Require ex-factory, container-load, booking, and weekly milestones; test the buffer.	Creates earlier visibility and accountability.	Monitoring does not create a backup if a milestone slips.	Partial
C Gate	Add Choice B, secure partial-expedite and backup-source quotes now, and release spend only after a trigger.	Preserves action time and keeps the decision evidence-based.	Requires cross-functional coordination; final cost remains quote-based.	APPROVE

Recommendation: Approve Choice C. Operations places both Vietnam launch items on exception control immediately; Procurement obtains quotes and approves any spend or sourcing change; Legal owns contract changes. AI calculates and flags risk, but a human reviews every trigger and makes the final decision.

Tools, Method & Verification. The actual shipment and catalog CSVs were analyzed in ChatGPT using GPT-5.6 Sol (High reasoning), independently recalculated in Python with pandas, and reproduced with traceable formulas in the supporting workbook. Cleaning checks found 0 duplicate POs, 0 required-field gaps, 0 date/status conflicts, 0 line-cost errors, 0 catalog-mapping errors, and 0 Days_Late mismatches; 16 in-transit receipt and delay blanks were preserved as valid unknowns, and 3 launch quantities were flagged for carton verification rather than silently changed. Spot checks: PO-4400 = 400 x \$26 = \$10,400 and 8 days late; PO-4401 = 0 days late; PO-4402 blanks are valid in transit. Decision rights: Operations owns escalation, Procurement owns spend/sourcing, Legal owns contract terms, and AI remains advisory—supporting analysis: [Google Sheets workbook](#).
